(Thanks for registering and paying in advance.

This gives us a head count and guarantees you a lunch!)

Join us for a presentation by
the creator of DisasterMap.net

DISASTERMAP.NET

- ❖ Ezra and his team are currently building a service that will remotely estimate disaster impacts and recovery needs as they happen or in the immediate aftermath. This service will enable disaster response agencies to more quickly identify and focus on communities with the greatest needs.
- ❖ [DisasterMap.net](#) aims to provide its users with enhanced situational awareness in real time as disaster events unfold. The [homepage](#) has a web map viewer that shows all current hazards impacting the United States.
- ❖ The [full screen map](#) lets you interact with the data. It also includes real time traffic reports, so that you navigate around blocked roads to get to a shelter. DisasterMap.net can give you personalized turn-by-turn directions to safety if you ever get trapped in a disaster zone.
- ❖ Plus, social media accounts are used to disseminate warnings and summaries. For instance, Twitter feeds provide ground reports, photos, and videos from disaster impacted areas.
